

WattmonMEGA

The WattmonMEGA is the most recent and capable release of the Wattmon range of embedded data logging and control devices. The connection pinouts are the same as for the [WattmonPro](#), but the internal hardware is improved, with four times as much RAM (512 KB), 100 Mbps Ethernet, a processor clock of 200 MHz and 12-bit ADC inputs (4096 possible values for the full scale). These improvements add flexibility and speed, making it over twice as fast as the [WattmonPro](#) and easier to customize for any application.
