# array_resize

WMMEGA FW >= 2.1179 WM-M2 FW >= 3.1179

Resize an indexed array

## Description

array_resize ( array $array, int $length )

## Parameters

**$array**: An indexed **array**

**$index**: The number of elements to resize to. If this is larger than the current size, 0 values will be inserted at the end. If the value is smaller, the array will be chopped.

## Return Values

## Example

===Create an indexed array and resize it

```
<pre><?

  $arr=indexed_array(4,100);  // array of 100 floating point values

  // fill it up
  for ($i=0;$i<100;$i++) {
    $arr[$i]=$i;
  }

  print(sizeof($arr));

  array_resize($arr,50);
  print_r($arr);

  array_resize($arr,120);
  print_r($arr);
?></pre>
```

The above example will output:

```
Key at Index 0 is name and value is John
Key at Index 1 is age and value is 30
Key at Index 2 is status and value is 1
```

## See Also

array() - Create an **array**, with optional values

array_keys() - Return keys for an **array** that has key/value pairs

sizeof() - Return the number of elements in an **array**

print_r() - Dump the contents of an **array** to the current output
