

ftp_open

WM-MINI2, WM-MEGA FW >= 2.1137 WM-M2 FW >= 3.1137

Open a connection to an FTP server

Description

```
int ftp_open ( string $host , int $port , string $username , string $password [, int $secure ] )
```

Connect to the server and return the response code.

Parameters

\$host: **String** containing the host name or IP address of the FTP server

\$port: **Int** FTP port number

\$username: **String** containing the FTP username

\$password: **String** containing the FTP password

\$secure: **Int** whether to use TLS (1) or not (0)

Return Values

int: Returns 1 if FTP connection was successful and 0 if it failed.

Example

```
<?
    $res = ftp_open("ftp.myserver.com",21,"myuser","mypassword");
    if ($res) {
        print("connected to FTP server!!");
        ftp_close();
    }
?>
```
