

implode

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Turn an array into a string

Description

`string implode (array $array, string delimiter)`

Turn an array into a string with the delimiter separating each element

Parameters

array: Array to be turned into a string

delimiter: Character to use for separating each array element put into the string

Return Value

String containing concatenated elements

Example

```
<?
$mylist=array("one","two","three","four");
$st=implode($mylist,"|");
print($st);
/* result is:
one|two|three|four
*/
?>
```

See Also

[explode\(\)](#) - Turn a string into an array

[array\(\)](#) - Create an array with values

Additional Information

The mainline PHP function `implode()` can accept its parameters in either order, but uPHP requires that the array comes first followed by the delimiter.

Wattmon uPHP's parameter order is easier to remember and more consistent: The delimiter parameter comes last in both [explode\(\)](#) and [implode\(\)](#).
