json_decode

WMMEGA FW >= 2.1180

JSON decode a **string** into a **array**

Description

array json_decode (string $data)

Return an **array** containing the JSON array representation of an JSON object (passed as a string).

Parameters

$data: A **string** to decode

Return Values

JSON decoded **array**

Example

```
<pre><?
   $json_string='{"a":1,"b":2,"c":3}';
   $res=json_decode($json_string);
   print_r($res);
?></pre>
```

The above example will output:

```
[$res] = Array (
[0] = Array (
    (int) [a] => 1
    (int) [b] => 2
    (int) [c] => 3
)
)
```

See Also

array() - Create an **array**, with optional values

explode() - Turn a **string** into an **array**

implode() - Turn an **array** into a **string**

json_encode() - Encode an array as a JSON string
