mem_dump

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Write the current memory map to /dump.txt

Description

Usage 1

mem_dump ( )

Usage 2 (FW > 1217)

string mem_dump (string $address, int len)

Parameters

Passing no parameters will cause the memory block structure to be written to /dump.txt.

Passing an address (hex string) and a length will return a hex encoded string of the contents of the memory area.

Return Values

None

Example

Create or overwrite the file /dump.txt

```
<?
  mem_dump();
?>
```
