

nvram_get

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Get a value from NVRAM

Description

mixed nvram_get (string \$key)

Parameter

\$key: **String** variable name to get associated value for

Return Values

Mixed: The value from NVRAM - depending on the value it will either return a **string**, an **integer** or a **float**. This is automatically done based on the contents of the variable. The actual value in NVRAM is always stored as a **string**. If the value is not found it returns **int** 0.

Example

```
<?
  $res=nvram_get("myvariable");
  if ($res) {
    print("The NVRAM Variable myvariable contains: ".$res);
  }
?>
```
