

nvram_set

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Set a value in NVRAM for a particular key. If the key already exists, it will overwrite the value with the new one.

Description

```
int nvram_set ( string $key , string $value )
```

Parameter

\$key: String variable name to set associated value for

\$value</html>: String value to set. If you wish to set a numeric value, first convert into a string using [strval\(\)](#) or [number_format\(\)](#)

Return Values

int: returns 1 on success and 0 on failure

Example

```
<?
$res=nvram_set("myvariable","Test");
if (!$res) {
    print("Error saving NVRAM key/value");
}
?>
```
