

sha1

WMPRO, WMMINI FW >= 1.1015 WMMEGA FW >= 2.0

Calculate the SHA1 hash of a **string**

Description

```
string sha1 ( string $input )
```

This can be used for cryptography or just for checksum calculations.

For more information on SHA1, see this [Wikipedia link](#).

Parameter

\$input: A **string**

Return Values

String: SHA1 hash (40 character hexadecimal number) of **input**

Example

```
<?
 // Name this example and call it with this: sha1.cgi?key=secretkey

 // SHA1 hash value for "secretkey":
 $hash="9885F8AF04289135DF259E34BD22D17FE45EA81E";

 if (sha1($_GET['key']) == $hash) {
   print("hashes match!");
 }
?>
```
