

MQTT Configuration

[Wattmon](#) can connect to any standard MQTT server - you can install the open source [mosquitto](#) for example. In order for [Wattmon](#) to work with MQTT, it needs to be enabled. To do this, create a config file called mqtt.ini in the /config/ folder.

```
[config]
enabled=1
mqtt_server=10.0.0.1
```

See the below table for an explanation of the possible parameters

KEY	VALUE	DESCRIPTION
enabled	1 or 0	Set this to 1 to enable MQTT support
mqtt_server	string	ip address or host name of MQTT server you are using
mqtt_user	string	Optional username when connecting to MQTT
mqtt_password	string	Optional password when connecting to MQTT
mqtt_id	string	Optional id of Wattmon device. If not specified, the device's MAC address will be used.
