call_user_func

WMPRO, WMMINI FW > 1.0 WMMEGA FW > 2.0

Call a user defined function with optional parameters

Description

mixed call_user_func (string $function_name [, mixed $parameters ...])
Return result as defined by the user function

Parameters

function_name: String containing the name of the user function to call

parameters: Optional parameters to pass to the function

Return Value

The result of the function can be of any type depending on the way the function is defined

Example

```
<?
function my_add($x,$y) {
  return $x+$y;
}
$result=call_user_func("my_add",1,3);
print($result); // result is 4
?>
```

Additional Information

If called from within a function, the return statement immediately ends execution of the current function, and returns its argument as the value of the function call.

See Also

return - Return program control to the calling module

print() - Output data to the current output stream such as a web page or terminal
