fgets_long

WattmonOS 3.11+

Get a string of arbitrary length from a file handle

Library

```
/lib/uphp/fileio.inc
```

Description

string fgets_long (int $handle)

Since uPHP has a maximum length of 255 bytes for strings read from disk, this function checks for the condition and keeps reading till the end of the string.

Parameters

$handle: Valid handle of a previously opened resource

Return Values

- **String** containing the line of characters (without CR/LF)

Example

```
<pre><?
  include("/lib/uphp/fileio.inc");

  $f = fopen("/logs/log.txt");

  if ($f) {
    $line=0;
    while (!feof($f)) {
      $st=fgets_long($f);
      print("Line ".(++$line)."=".$st);
    }
    fclose($f);
  }
```

```
?></pre>
```
